

Private Endpoint Troubleshooting Flow

Note: Assuming that there is no connectivity issue, and the cx is running the test using the right private domain name according to the link below:

<https://docs.microsoft.com/en-us/azure/private-link/private-endpoint-dns#azure-services-dns-zone-configuration>

If the DNS forwarder and the PE are on # VNETs, make sure you set up a virtual link between the PE private zone and the VNET that hosts the DNS forwarder.
