Private Endpoint Troubleshooting Flow

Note: Assuming that there is no connectivity issue, and the cx is running the test using the right private domain name according to the link below:

https://docs.microsoft.com/en-us/ azure/private-link/private-endpointdns#azure-services-dns-zoneconfiguration

If the DNS forwarder and the PE are on # VNETs, make sure you set up a virtual link between the PE private zone and the VNET that hosts the DNS forwarder.
